## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 9\_Q3

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

Assist Pranitha in developing a program that takes an integer N as input, representing the number of names to be read. Then read N names and store them in an ArrayList. Finally, input a search string and output the frequency of that string in the list of names.

Note: Some parts of the code are provided as snippets, and you need to complete the remaining sections by writing the necessary code.

##### ***Input Format***

The first line of input consists of an integer N, representing the number of names to be read.

The following N lines consist of N names, as a string.

The last line consists of a string, representing the name to be searched.

### **Output Format**

The output prints a single integer, representing the frequency of the specified name in the given list.

If the specified name is not found, print 0.

Refer to the sample output for formatting specifications.

### **Sample Test Case**

Input: 5

Alice

Bob

Ankit

Alice

Pranitha

Alice

Output: 2

### **Answer**

```
import java.util.Scanner;
import java.util.ArrayList;
import java.util.Collections;
public class Main{
    public static void main(String []args){
        Scanner in=new Scanner(System.in);
        int n=in.nextInt();
        in.nextLine();
        ArrayList<String> arr=new ArrayList<>();
        for(int i=0;i<n;i++) arr.add(in.nextLine());
        String target=in.nextLine();
        System.out.print(Collections.frequency(arr,target));
    }
}
```

**Status :** Correct

**Marks :** 10/10
